

The University of Oslo is Norway's oldest and highest ranked educational and research institution, with 28 000 students and 7000 employees. With its broad range of academic disciplines and internationally recognised research communities, UiO is an important contributor to society.

Centre for Molecular Medicine Norway (NCMM) was established in 2008 and is the Norwegian node in the Nordic EMBL Partnership for Molecular Medicine. NCMM is a joint venture between the University of Oslo, Health Region South-East and the Research Council of Norway. From 2017 NCMM is merged with the Biotechnology Centre of Oslo and now has altogether 11 research groups. The overall objective of NCMM is to conduct cutting edge research in molecular medicine and biotechnology as well as facilitate translation of discoveries in basic medical research into clinical practice.

3 Postdoctoral Fellowships in Structural Biology and Drug Development

Three postdoctoral positions (three years, extendable) are available in the Group of Structural Biology and Drug Development (Luecke group) at the Centre for Molecular Medicine Norway (NCMM) in Oslo.

The Group for Structural Biology and Drug Development investigates medically relevant proteins and protein complexes using biophysical, biochemical and structural approaches. The projects aim at understanding structure-function relationships with an emphasis on drug discovery. We employ a variety of biochemical and biophysical techniques (x-ray crystallography, single particle cryo electron microscopy, DSF, ITC, SPR, HDX-MS, SAXS, molecular dynamics simulations etc.). Specific, externally funded projects include inhibitor discovery targeting the *Helicobacter pylori* pH acclimation system (a pH-gated urea channel and a cytoplasmic urease¹), and discovery of compounds that reactivate p53 cancer mutants in vitro and in vivo².

The positions are available immediately. We seek highly motivated individuals with an excellent track record and experience in protein purification and biophysical and biochemical characterization of proteins and protein complexes, preferably including membrane proteins. Knowledge of one or more structural biology technique (x-ray crystallography, cryo electron microscopy or NMR) is required. Postdoctoral fellows will be supported in developing their own research area on their path to independence. We offer a stimulating environment with excellent working and social benefits in the Happiest Country on Earth.

The ideal candidate will have:

- A Ph.D. degree in biochemistry, biophysics, chemistry, or a related area
- Hands-on experience with extraction and purification of proteins and assembly of protein complexes (membrane protein experience preferred)
- Ability to independently perform experiments, analyze and interpret results
- Documented ability to write scientific manuscripts (one or more first author papers from Ph.D. and postdoctoral studies will be highly valued)
- Excellent English interpersonal, communication and writing skills
- Ability to operate as a team player in a multi-disciplinary environment

Application via website required and must include:

- Cover Letter stating motivation and research interests
- A detailed C.V.
- A complete list of scientific publications with brief statement of candidate contribution
- List of references (name, institution, e-mail, telephone number and relation to candidate)

Salary: Postdoctoral Research Fellow (SKO 1352) with a salary level of NOK490,900-569,000 (app. €51,800-€60,400) per year, depending on qualifications.

Inquiries:

About the position and projects: Prof. Hartmut "Hudel" Luecke (hudel@ncmm.uio.no).

About administrative aspects of the application: Nina Modahl (ninam@ncmm.uio.no).

In accordance with the University of Oslo's equal opportunities policy, we invite applications from all interested individuals regardless of gender or ethnicity. UiO has an agreement for all employees, aiming to secure rights to research results a.o. Note that no one can be appointed for more than one specified period at the same institution.
