PhD Research Fellowship in Plasma and Space Physics
- Ionospheric Plasma Processes in the Polar Regions

Job description

A position as PhD Research Fellow in Plasma and Space Physics, with focus on ionospheric plasma processes in the polar regions, is available at the Department of Physics.

No one can be appointed for more than one PhD Research Fellowship period at the University of Oslo.

The PhD position is of 3 years duration. Within the framework of the position, duties may be assigned.

Starting date: 1 September.

More about the position

The position is funded through the ERC Consolidator Grant entitled: “4DSpace: integrated study for space weather at high latitudes”, which combines in-situ experiments by sounding rockets, ground-based measurements, numerical modeling, and satellite data. It aims to determine the role of the auroral particle precipitation at different geomagnetic conditions in forming plasma density irregularities at various altitudes, by accounting also for collisions with neutral background. It will also establish foundations for the physically based forecasting of scintillations of trans-ionospheric radio waves in the polar regions.

Within the scope of the project for this position, the successful PhD candidate will carry out data analysis from the in-situ experiments in ionospheric plasmas from several sounding rocket experiments. The aim will be to identify and understand the statistical properties of plasma irregularities at specific geomagnetic conditions, which also include auroral particle precipitation and also considering collisional plasma at different altitudes.

The candidate will analyze the results in the context of plasma processes in the ionosphere down to kinetic scales. The experimental results will be supported by theoretical / numerical approaches. The rocket data will also be analyzed in the context of the ground-based observations by radars, all-sky imagers and GNSS scintillation receivers, which provide the geomagnetic context for the in-situ experiments.

The successful candidate will be a part of Section for Plasma and Space Physics at the Department of Physics as well as the 4DSpace Strategic Research Initiative. The main focus of these groups is to advance our understanding of processes in the high-latitude ionosphere, including plasma irregularities, turbulence and space weather effects in the polar regions. The main tools used for this research are ground-based instruments, including radar and optical systems (EISCAT, SuperDARN, all-sky-imagers), advanced numerical models, and instruments on board spacecraft and sounding rockets. For more information, see:

Qualification requirements

The Faculty of Mathematics and Natural Sciences has a strategic ambition of being a leading research faculty. Candidates for these fellowships will be selected in accordance with this, and expected to be in the upper segment of their class with respect to academic credentials.

Qualification requirements:

- Master’s degree or equivalent in physics or related discipline
- Very good background in plasma physics
- Fluent oral and written communication skills in English. Please see English requirements for applicants from outside of EU/EEA countries
- Good social and collaboration skills and ability to work independently and in an interdisciplinary scientific environment

Grade requirements:

The norm is as follows:

- The average grade point for courses included in the Bachelor’s degree must be C or better in the Norwegian educational system
- The average grade point for courses included in the Master’s degree must be B or better in the Norwegian educational system
- The Master’s thesis must have the grade B or better in the Norwegian educational system

http://www.mn.uio.no/english/research/phd/application/application.html

Desired qualifications:

- Experience in ionospheric plasma physics at high latitudes and dynamic phenomena related to solar wind-magnetosphere-ionosphere coupling.
- Experience in working with data from in-situ plasma measurements, such as with Langmuir probes or electric field instruments.
The purpose of the fellowship is research training leading to the successful completion of a PhD degree. The fellowship requires admission to the PhD program at the Faculty of Mathematics and Natural Sciences. The application to the PhD program must be submitted to the department no later than two months after taking up the position. For more information see:

http://www.uio.no/english/research/phd/

http://www.mn.uio.no/english/research/phd/

We offer

- Salary NOK 479 600 - 523 200 per annum depending on qualifications and seniority as PhD Research Fellow (position code 1017)
- Vibrant international academic environment
- Attractive welfare benefits and a generous pension agreement
- Oslo’s family-friendly surroundings with their rich opportunities for culture and outdoor activities

How to apply

The application must include:

- Cover letter including a description of scientific interests and the motivation for applying for the position (max. 2 pages)
- CV (summarizing education, positions and academic work - scientific publications)
- Copies of the original Bachelor and Master’s degree diploma, transcripts of records and letters of recommendation
- Documentation of English proficiency if needed (please see admission criteria)
- List of publications and academic work that the applicant wishes to be considered by the evaluation committee
- Names and contact details of 2-3 references (name, relation to candidate, e-mail and telephone number)
- Applicants who are interested in teaching need to add to this application a description of their motivation for teaching.

The application with attachments must be delivered in our electronic recruiting system, please follow the link “Apply for this job”. Foreign applicants are advised to attach an explanation of their University's grading system. Please note that all documents should be in English (or a Scandinavian language). Note that applications with missing documents will not be considered further.

Applicants will normally be called in for an interview.

Formal regulations

Please see the guidelines and regulations for appointments to Research Fellowships at the University of Oslo.

According to the Norwegian Freedom of Information Act (Offentleglova) information about the applicant may be included in the public applicant list, also in cases where the applicant has requested non-disclosure.

The University of Oslo has an agreement for all employees, aiming to secure rights to research results etc.

The University of Oslo aims to achieve a balanced gender composition in the workforce and to recruit people with ethnic minority backgrounds.

About the University of Oslo

The University of Oslo is Norway’s oldest and highest rated institution of research and education with 28 000 students and 7000 employees. Its broad range of academic disciplines and internationally esteemed research communities make UiO an important contributor to society.

The research at the Department of Physics covers a broad range of subfields within physics and technology: From space research to medical physics. A good proportion of the research is interdisciplinary, and conducted in close cooperation with collaborators in Norway and abroad. Education and teaching are other essential activities.

We offer a broad range of courses, and the Department is involved in several study programmes at bachelor’s and master’s level. Some of the best lecturers in Norway are amongst our employees, and we are proud of our prizewinning teaching and learning environment. The Department has 200 employees, of which 50 are permanent scientific positions. On a yearly basis 20 students complete their Ph.D. and 50 finish their M.Sc. degree.
